## ECHOES OF MEMORY: INTERACTIVE CONVERSATIONS WITH HOLOCAUST SURVIVORS THROUGH AI

### Objectives

- **Combat knowledge gaps and fading remembrance of the Holocaust**, particularly among younger generations, by promoting awareness and historical accuracy.
- **Counter Holocaust denial and revisionism, actively addressing misinformation and distortion** through evidence-based education and public discourse.
- **Promote interactive, sustainable, and engaging learning pathways** that foster critical thinking, empathy, and historical understanding.
- **Preserve Holocaust memory in the post-survivor era**, ensuring the stories, lessons, and legacy are not lost but meaningfully passed on.
- **Advance a transnational and transcultural approach to Holocaust education and remembrance**, fostering shared responsibility and understanding across borders.
- **Establish a multidisciplinary collaboration** among educational institutions, Jewish communities, museums, and research organizations to strengthen capacity and broaden reach.
- **Develop inclusive and modern educational solutions**—delivering content and methods that are gender-sensitive, disability-inclusive, and age-appropriate—ensuring equitable access and engagement for all learners.

### Mission

By creating **AI chatbots** that simulate conversations with Holocaust survivors, the project will offer engaging, interactive, and personalized learning pathways accessible to diverse audiences—particularly younger generations—in a culturally responsive and gender-sensitive manner. This approach will preserve survivors' testimonies for future generations while making Holocaust education more engaging and accessible.

### Consortium

This project has received funding from the European Union's CERV programme under Grant Agreement N° 101196254
